Learn to purrr

Purrr is the tidyverse's answer to apply functions for iteration. It's one of those packages that you might have heard of, but seemed too complicated to sit down and learn. Starting with map functions, and taking you on a journey that will harness the power of the list, this post will have you purrring in no time.

August 19, 2019

Rebecca Barter

Map functions: beyond apply Simplest usage: repeated looping with map The tilde-dot shorthand for functions Applying map functions in a slightly more interesting context Maps with multiple input objects List columns and Nested data frames Nesting the gapminder data Advanced exercise Additional purrr functionalities for lists Keep/Discard: select_if for lists Reduce Logical statements for lists Answer to advanced exercise “It was on the corner of the street that he noticed the first sign of something peculiar - a cat reading a map” - J.

The caret Package

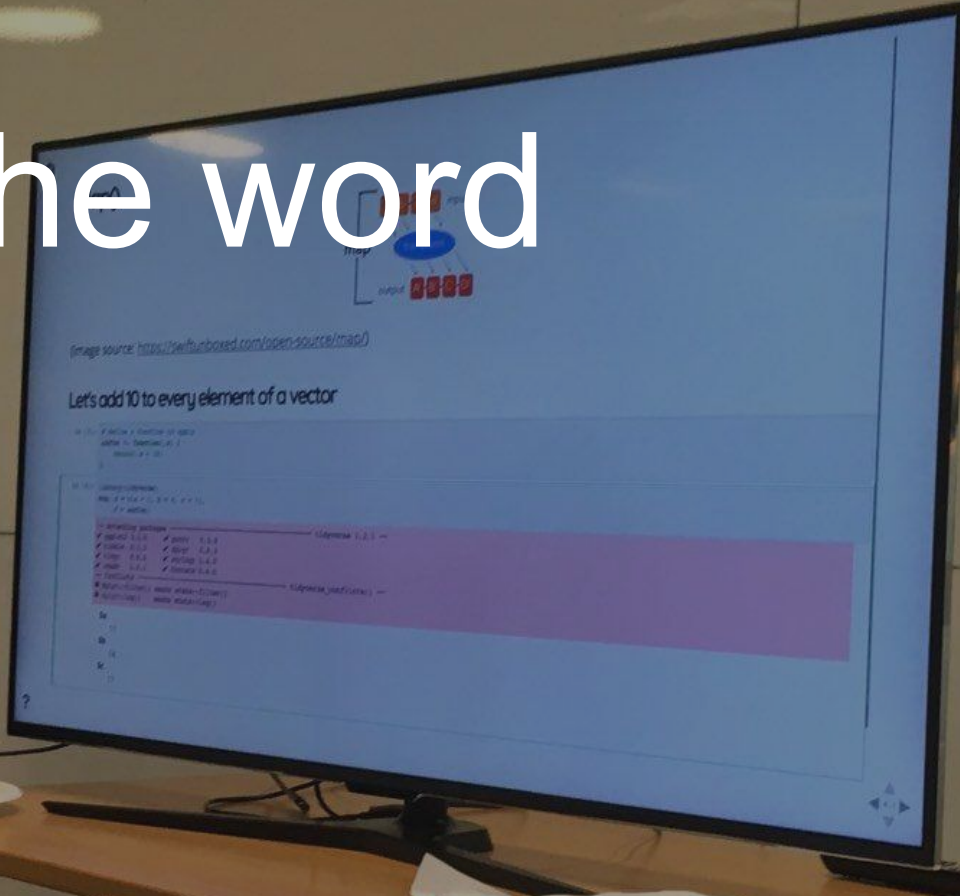

Mar 27, 2019 - Documentation for the **caret** package. ... DataCamp has a beginner's **tutorial** on machine learning in R using **caret** . You can always email me ...

 www.rebeccabarter.com › blog › 2017-11-17-caret_tutorial ▼

A basic tutorial of caret: the machine learning package in R

Nov 17, 2017 - Note: This **tutorial** was based on an older version of the abalone data that had a binary old variable rather than a numeric age variable.

Blogdown

Each page/post is an R Markdown file

It produces a static website (based on Hugo)

Getting started with blogdown

```
# run the following commands once:
```

```
# install blogdown
```

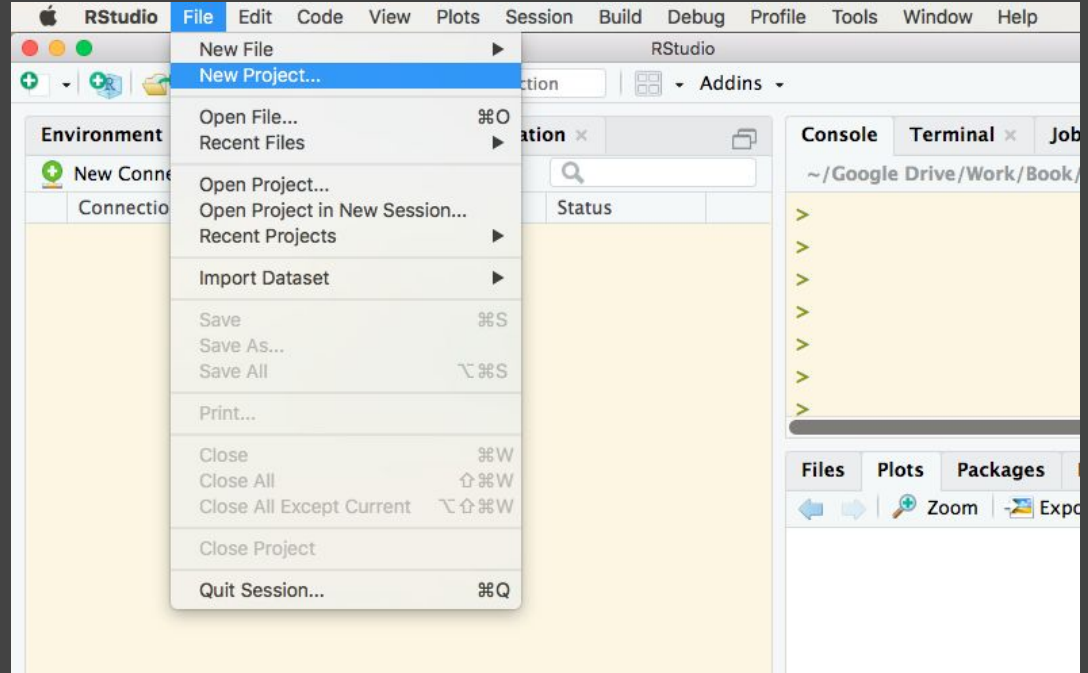

```
> install.packages('blogdown')
```

```
# install hugo
```

```
> blogdown::install_hugo()
```

Select: New Project

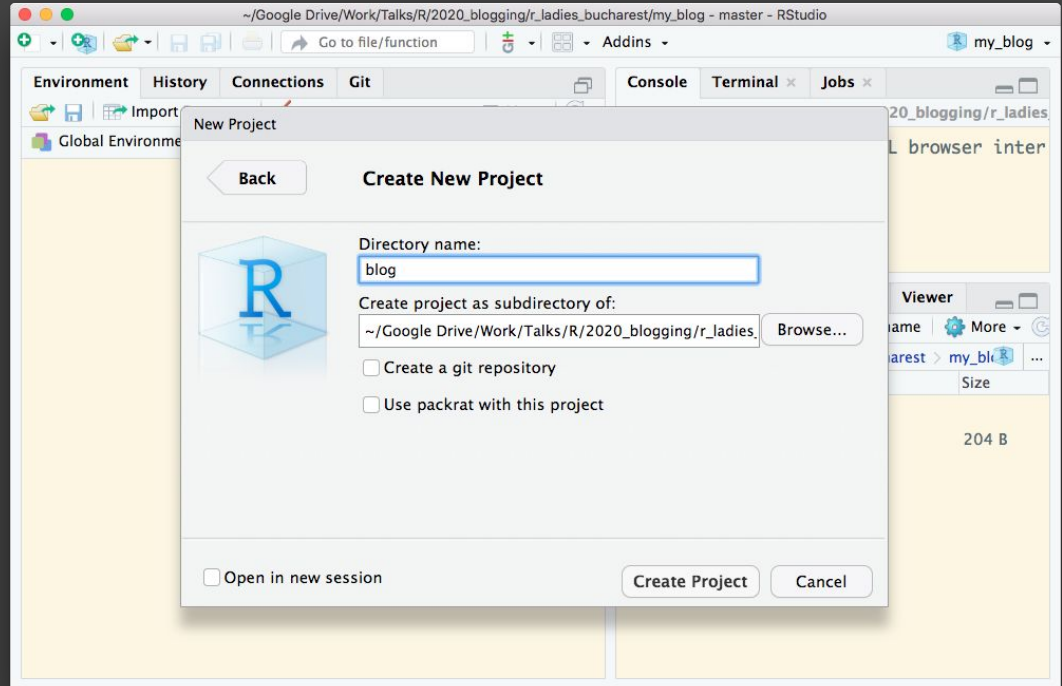

Start a new project

File -> New Project

Select: New Directory

Select: New Project

Name your project and
save it in a sensible
location

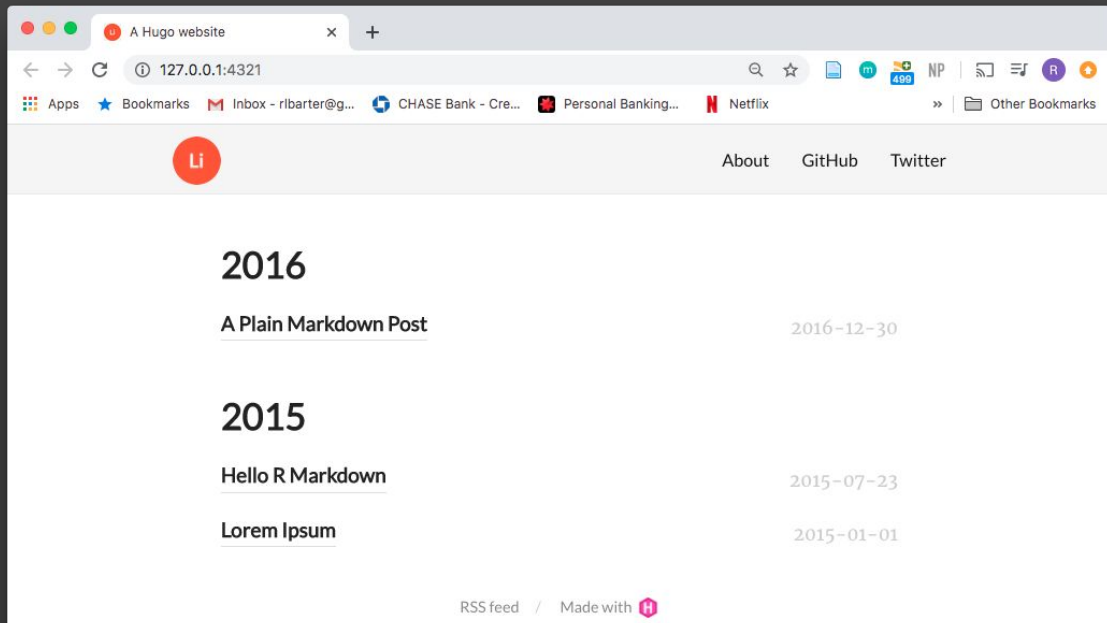

Turn your project into a blog

```
# turn project into blog  
> blogdown::new_site()
```

Turn your project into a blog

```
# turn project into blog  
> blogdown::new_site()
```

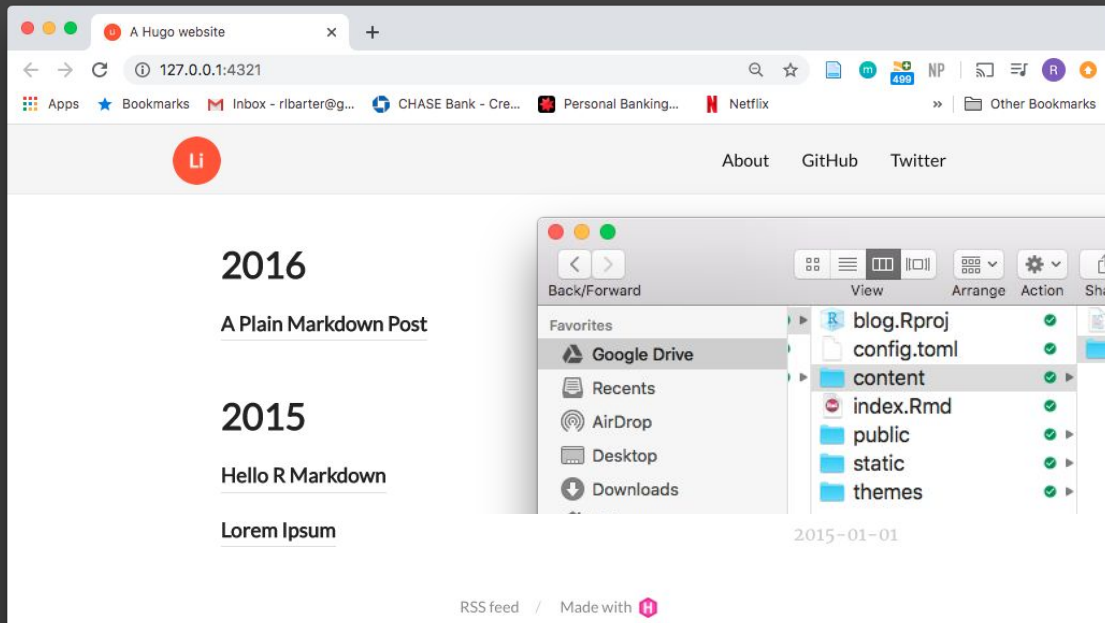

This will create a
webpage.

Turn your project into a blog

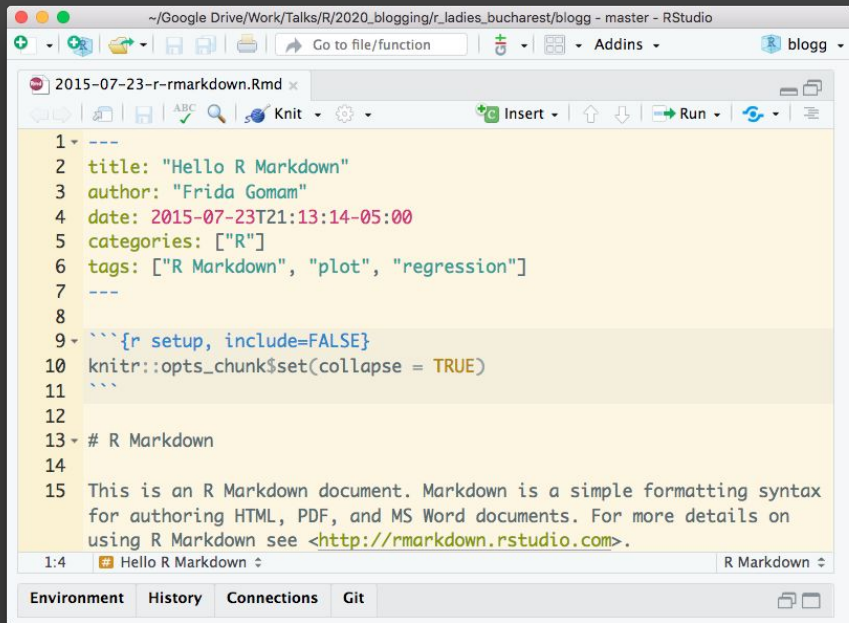

```
# turn project into blog  
> blogdown::new_site()
```

Look at the structure
of your local folder.
Your posts will live in
content/post

Turn your project into a blog

(R)Markdown file

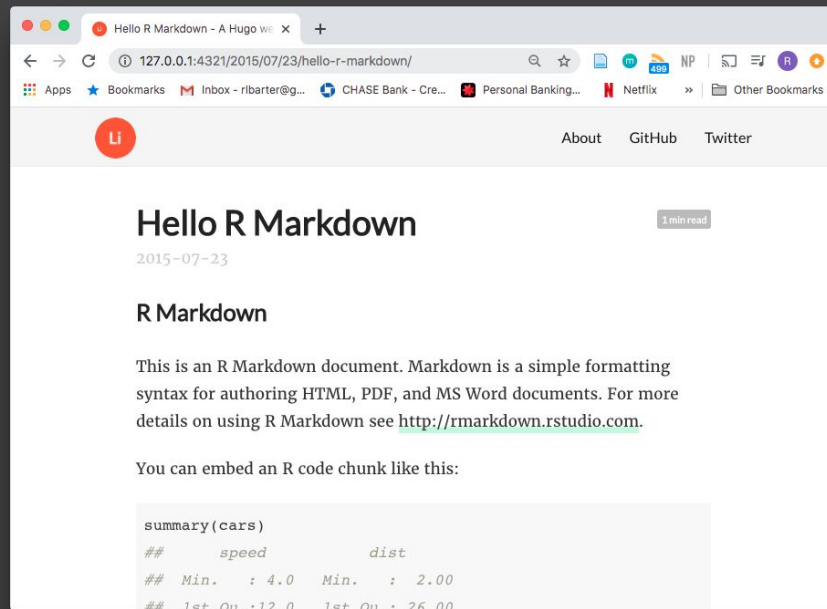

The screenshot shows the RStudio interface with a file named "2015-07-23-r-rmarkdown.Rmd" open. The editor displays the following R Markdown code:

```
1 ---
2 title: "Hello R Markdown"
3 author: "Frida Gomam"
4 date: 2015-07-23T21:13:14-05:00
5 categories: ["R"]
6 tags: ["R Markdown", "plot", "regression"]
7 ---
8
9 ```{r setup, include=FALSE}
10 knitr::opts_chunk$set(collapse = TRUE)
11 ```
12
13 # R Markdown
14
15 This is an R Markdown document. Markdown is a simple formatting syntax
    for authoring HTML, PDF, and MS Word documents. For more details on
    using R Markdown see <http://rmarkdown.rstudio.com>.
```

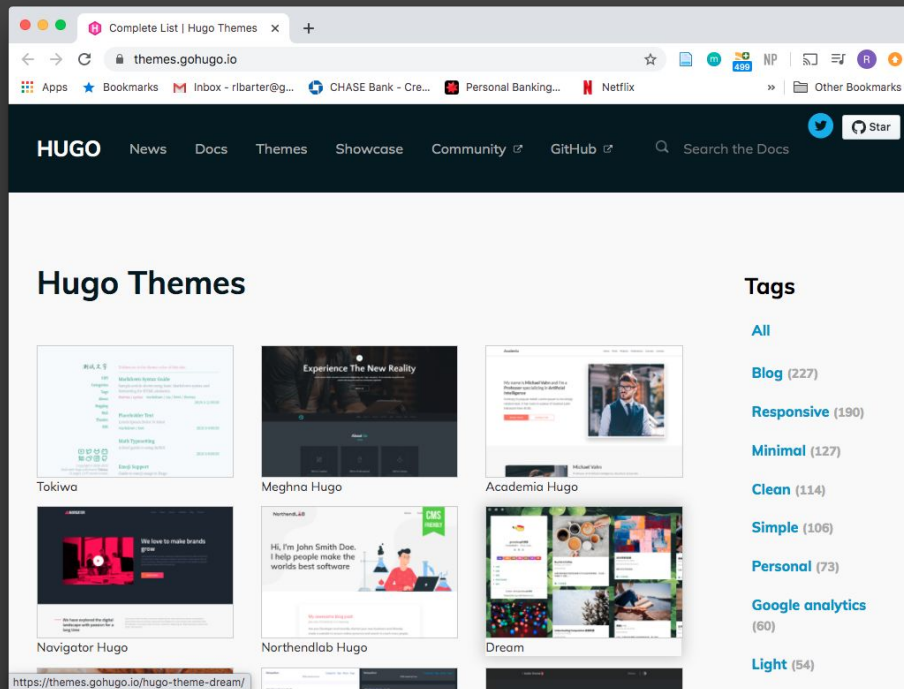

The RStudio interface includes a toolbar at the top with icons for file operations, a "Go to file/function" search bar, and a "blogg" button. The bottom pane shows the "Environment" tab.

Post on local site

Themes

<https://themes.gohugo.io/>

Changing themes

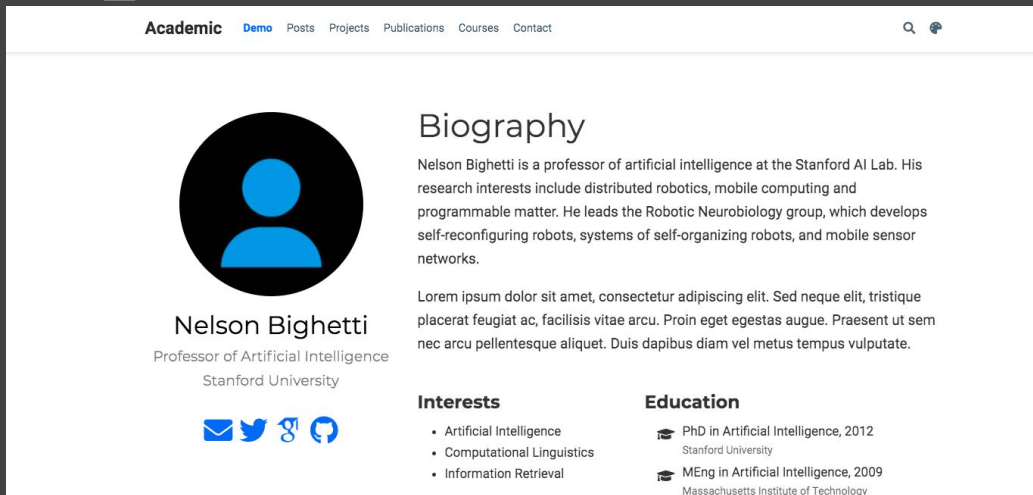

The cleanest way to change the theme of your site is to make a new one:

Changing themes

The cleanest way to change the theme of your site is to make a new one:

In a new project:

```
> blogdown::new_site(theme = 'gcushen/hugo-academic')
```

Updating content

When you update the content, RStudio will automatically update your page for you.

To stop the automatic reloading, run

```
> blogdown::stop_server()
```
